

CHANGING A MOTOR CABLE

Cables are available in 6' (standard), 12', 18', and 24'. You may cut them shorter to suit your application and mount the plug yourself. Do NOT cut Smart Motor cables shorter than 3' as the ground wire serves as the antenna and you will lose reception with less than 3' of cable. Smart Motors have 3 conductors and Hardwired Motors have 4.

SOMFY RADIO-SMART (ALTUS) 110V PLUG IN MOTOR or SOMFY 110V HARD WIRED MOTOR

1. If shade is already installed in brackets, take the motor end out of its bracket and have someone hold the end of the shade up while you work (or take it out of both brackets completely.)
2. Use your fingernail to pry up the edge of the yellow motor end cap so that it hinges open across the middle.
3. Use a Philips screwdriver to remove the 2 screws.
4. Remove the existing cable and replace with the new cable.
5. Replace screws and snap motor cover down.
6. Replace shade in brackets.
